Work Experience

2020 - Present

Senior Software Engineer

Global Software Solutions

My responsibilities include overseeing new requirements, resolving bugs, and ensuring the stability of our premium client.

Projects

14 Months

NPSS Edge

National Payment Systems Strategy(NPSS) or UAE Instant Payment Platform (IPP) is designed to make

payment systems universally interoperable and foster the transition to a cashless society built around real-time. It is the Instant Payment Platform (IPP) that enables real-time faster payments and funds transfers around the clock (24*7) and digital payments across the UAE financial sector.

13 Months

Torus 9.0

Torus 9.0 is a POC project, with a main goal of developing our torus application with latest technologies, more features.

3 Months

Torus

Torus is a NextGen Unified Low code platform that follows a model-driven approach for building, extending, integrating, and deploying rich cloud-based applications rapidly. Using Torus we can create the project based on requirements from the client with very low code.

19 Months

Veracious Payment Hub

VPH is the critical problem solver for Banks created using TORUS. It includes processes like Cheque Clearance System, Mandate, Electronic Fund Transfer, and Real-Time Gross Settlement. Both the Credit and Debit processes are handled in the project. Cheques are scanned and stored as an image file using a windows application.
