Profile

I am passionate to develop reliable software service with a **3 years of experience** on efficient database designing, performance optimization, unit & Integration testing and maintaining documentation of application releases and delivery.

Skills

- SQL: PostgreSQL, MySQL
- NOSQL: Elastic Search, Kibana, Logstash
- Programming: Java, Python
- Web Technology: HTML, CSS, Java Script
- Frameworks: React JS

Professional Experience

Senior Data Engineer VINSINFO Pvt Ltd., Chennai

- Good Understanding on Business Requirement
- Specialized in Stored Procedure/ User defined functions
- Writing Stored Procedure for Android application, Web Application and SASS.
- Integration of data from source to destination using script
- Query Optimization and performing tuning through indexing of tables.
- Creating partition table, fine tuning auto Vacuum settings and Upgrade SQL version on deprecation.
- Worked on Elastic Search for querying ecommerce Data from Index and continuous Integration from database to Elastic search index using Logstash.
- Elastic search Query formation for ecommerce search and retrieving filters.

Projects

Ecommerce Solution: JAN 2022- Present

Team Size: 10 - 15

- Manage various business application and integration application solution with ecommerce platforms like Big Commerce, Magento and Shopify.

- I was responsible for designing and implementing the various database schemas.
- Writing optimistic SQL query with Store Procedure or User Defined Function.
- Creating pipeline with ELK Stack for reliable and customized searching experience.

Ecommerce Filter App:

Technology used: Elastic search, PostgreSQL, Stored Procedure

Application provides ecommerce product filtering, product search, suggestion and listing product page.

- I am responsible for developing product search, suggestion using Elastic Search
- Managing index settings and mappings on Elastic Search.
- Writing DSL query of terms, query string, aggregation and custom analyzer on index settings.
- Monitoring cluster health of elastic search index on Kibana
- Syncing Data from Database to elastic search through Logstash configuration file with input, filters and output.

Ecommerce Bopis App:

Technology used: PostgreSQL, Stored Procedure

Buy online or pick up in store on ecommerce. It helps to buy online product and also pick up the available product with available date time on different store.

- I am responsible for manage inventory stocks and warehouse stocks based different store locations.
- Creating dashboard for store location and warehouse stock levels, orders count
- Adding functionality for listing orders with search on various parameter.

Ecommerce Auction App:

Technology used: PostgreSQL

It helps the ecommerce to show case the auction products where customer can place bid and managing auction products and approving bid

- I am responsible for deactivating expired auctions.
- Managing Auction products and bid approval.

Ecommerce Bundle App:

Technology used: PostgreSQL

It helps the ecommerce to show case the product as bundle and kits, where can buy product as bundle and managing bundle or kits

- I am responsible for listing bundled orders.
- Managing list of product as bundle or kits with bundle settings.

Ecommerce Integration:

Technology used: MySQL, PostgreSQL

- Integration of data from source system to destination system
- I am responsible for defining intermediate schema to extract and store data
- Transform the source data and manage to the intermediate schema
- Loading the intermediate data to destination system.

Navidok Mobile Application: MAR 2021-DEC 2022

Team Size: 7

Technology used: PostgreSQL, Stored Procedure, ReactJs

Application provides a social connection within marine industry among ship owner, dock owner, shipyards owner and supplier of ships component, whereas ship owner navigate on sea routes, get quotation of ship component from various supplier on nearest dock.

- I am responsible for search functionality to get nearby dock place based on Inautical miles.
- Manage vendor and their credit amount to show their advertisement on user search with respective location.
- Generating quotation for required paint or anode calculation with respective ship size.
- Import functionality to manage ship details and location details.

Go Wall:

Technology used: PostgreSQL, Stored Procedure

Web Application provides internal meeting of organization, taking notes, duplicating meeting with notes and draggable notes.

- I am responsible for swapping the notes while dragging
- Creating copy of meeting with respective notes.

Beagle Bay:

Technology used: PostgreSQL, Stored Procedure

This is the site reservation managing site developed to book the available sites for the campground. It includes both customer and admin sections. The Module includes about booking, reservations, check-in and check-out process of the booked customers and also maintaining the payment process while checkout.

Internal tools and Achievement

Technology used: Java Spring Boot, Themeleaf, python, Flask

- Import Manager: Import details using excel file to destination table which maps the header with respective column.
- Excel Merger: Collect and Merge multiple excel into single excel file removing duplicate based on product SKU and Generate excel file based on desired product SKU list.
- Sync Validator: List the all ES temp table with respective ES temp table

Open Projects:

Technology used: HTML, CSS, JS
